

# ALL-TRACE

## WEIGHT GAIN

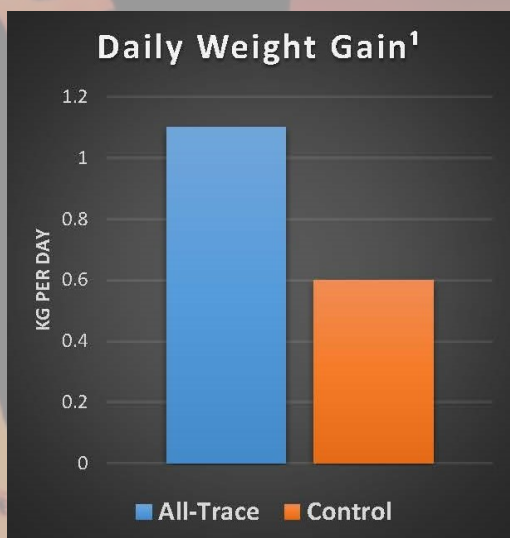

Complete Peace of Mind  
All year round

- Enhance growth rates
- Increase daily weight gains by 0.5kg/hd <sup>1</sup>
- Maximise production returns

# ALL-TRACE - ALL THE TIME

All-Trace boluses aid in the prevention of trace element deficiencies, helping to boost your bottom line! Trace element deficiencies in grazing cattle can lead to reduced feed intake, lowered feed conversion efficiency and susceptibility to infection and disease.

Young cattle treated with All-Trace boluses had an average daily weight gain of 1.1kg/hd/day compared to 0.6kg/hd/day in untreated animals<sup>1</sup>.

Both Australian<sup>2</sup> and International trials<sup>1</sup> have shown significant weight gain responses to supplementation with All-Trace.

The minerals and vitamins contained in All-Trace provide 240 days of supplementation with zero residue and zero withholding period.

Steers treated with All-Trace boluses gained an additional 43kg compared to untreated individuals in the same herd<sup>2</sup>.
